

SaaS Subscription Revenue Analysis

Customer Revenue Performance & Churn Analysis Using Microsoft Excel

Project Overview

Software as a Service (SaaS) companies rely on a subscription based business model as their primary source of revenue. In this model, business success depends not only on acquiring new customers but also on retaining existing customers and encouraging them to maintain their subscriptions. Therefore, analyzing customer acquisition performance, revenue contribution, and churn rates is essential for supporting sustainable business growth.

This project analyzes SaaS customer subscription data to understand revenue patterns, evaluate customer retention performance, identify the key factors influencing customer churn, and develop data-driven recommendations that can support strategic business decision-making.

Business Objectives

This project aims to answer the following questions:

- Which customer segment generates the highest recurring revenue?
- Which acquisition channel contributes the most revenue?
- What is the current churn rate?
- How many active customers remain?
- What opportunities exist to improve customer retention and revenue growth?

Dataset Overview

Customers Table

Column	Description
Customer_id	Unique customer identifier
Signup Date	Registration date
Country	Customer location
Acquisition Channel	Customer acquisition source
Segment	SMB, Mid-Market, Enterprise

Subscriptions Table

Column	Description
Customer_id	Unique customer identifier
Monthly Price	Monthly subscription fee
Start Date	Subscription start date
End Date	Subscription end date

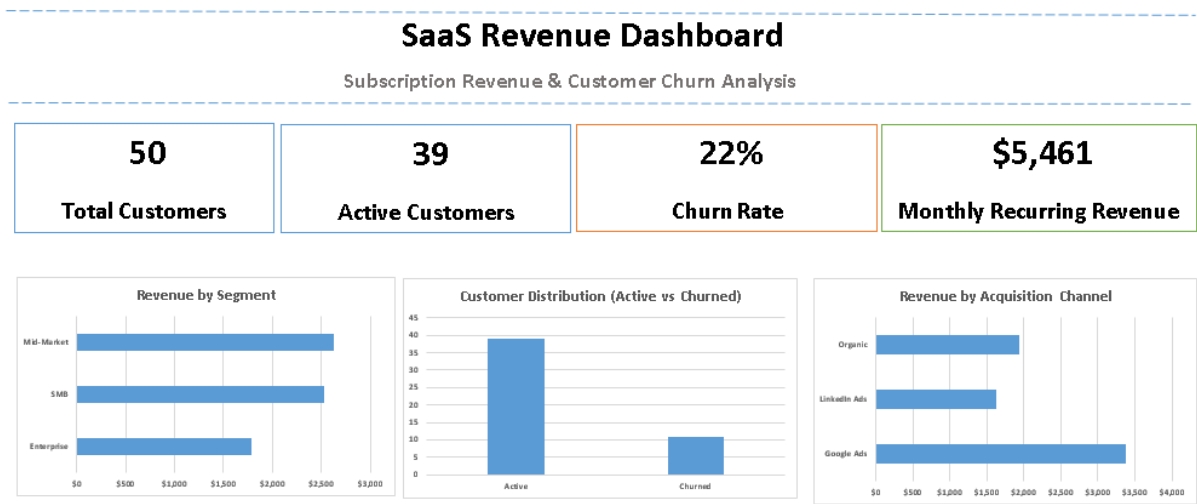

Analysis & Dashboard

Data Preparation

The following data quality checks were performed:

- Validated customer identifiers
- Standardized text formatting
- Checked missing values
- Verified subscription records
- Calculated customer status (Active vs Churned)
- Validated revenue calculations

Dashboard Overview

Analyzed customer subscription data to evaluate recurring revenue performance, customer retention, and acquisition channel effectiveness.

Key Results

- Monthly Recurring Revenue: \$5,461
- Active Customers: 39
- Customer Retention Rate: 78%
- Churn Rate: 22%
- Highest Revenue Segment: Mid-Market
- Best Acquisition Channel: Google Ads

Key Findings

Finding 1

Mid-Market customers generate the highest recurring revenue (\$2,633).

Finding 2

Google Ads is the strongest acquisition channel (\$3,380).

Finding 3

The company retains 78% of its customers (39 active customers).

Finding 4

The churn rate of 22% indicates room for retention improvement.

Business Recommendations

Recommendation 1

Increase acquisition efforts targeting Mid-Market customers.

Recommendation 2

Continue optimizing Google Ads campaigns.

Recommendation 3

Implement customer retention initiatives.

Recommendation 4

Monitor churn metrics regularly.

Recommendation 5

Develop customer success programs.

Business Impact

- Better visibility into revenue performance
- Improved customer retention monitoring
- More effective marketing investment decisions
- Support for revenue growth planning
